

Import Map Specification

Status: Draft (export-ready)

Scope: Import Map tab only (cluster/phase/document-map review behavior)

Brief description

The Import Map view is the import-specific workspace used after seeding clusters and during detail ingestion/review. It prioritizes allocation transparency: seeded clusters, mapped node counts, phase visibility control, and dual document-map review panels (Content Map + Imported Map).

Visual overview

```
```mermaid
flowchart TD
 A[Import Map Tab] --> B[Map Clusters Layer]
 A --> C[Map Phases Layer]
 A --> D[Document Map Review]
 D --> E[Content Map panel]
 D --> F[Imported Map panel]
 B --> G[Cluster sorting]
 G --> G1[Mapped first by node count]
 G --> G2[Empty clusters last, preserve TOC order]
 B --> H[Empty cluster dimming]
 C --> I[Hide/Show toggle for phases]
```
```

Functional scope

1. Cluster strip/layer:
 - Pulls seeded labels from map groups and/or cluster annotations.
 - Preserves seeded clusters even if currently unmapped (empty cluster remains visible).
 - Sort behavior:
 - mapped clusters first (descending mapped count),
 - then empty clusters,
 - tie-breaker by original seed order.
2. Map phases:
 - Import-map-only collapse/expand behavior (phase hide/show toggle).
3. Document map review:
 - Explicit section with two discoverable panels:
 - Content Map,
 - Imported Map.
 - Filter by block type (`all`, `context`, `process`, `subprocess`, `fact`, `unclassified`).
 - Coverage summary (matched/unmatched/low-confidence).

State model (UI)

- `selectedTab = 'import\_map'`
- `importMapPhasesCollapsed`
- `docMapPanelsCollapsed`

```
- `docMapContentFilter`
- `docMapImportedFilter`
- `docMapTargetKind` (controls upload target map type)

## Rendering model

- Clusters derive from:
  - `currentModel.projections.map.groups`,
  - annotation nodes with `Cluster:` labels.
- Mapped counts derive from non-annotation nodes by `metadata.stage`.
- Empty clusters are visually obscured (dim styling) but not removed.

## File touchpoints

- `src/App.tsx`
  - `mapClusters` derivation
  - import-map rendering blocks
  - map phases collapse toggle
  - document map review panel rendering
- `src/App.css`
  - import-map cluster chip styles
  - empty cluster/dim classes
  - document map panel styles

## Export/readiness

- Export compatible (UI/config spec).
- No canonical schema mutation required.
```
