Overview

This export package captures the current import-focused application architecture and behavior, split into targeted specifications for implementation, review, and handoff.

Included spec set

1) APP_SPEC_OVERVIEW.md

Full application specification as currently implemented: shell, store, import flows, canvas behavior, map views, inspector, export/import controls, and integration points.

2) IMPORT_INTELLIGENCE_WIZARD_SPEC.md

Import intelligence and wizard workflow only:

- TOC seed -> detail ingest -> review -> confirm lifecycle
- Text/document/AI assist routing
- OCR cleanup and external AI assist pathway
- semantic import graph construction and decision branch semantics

3) LAYOUT_INTELLIGENCE_SPEC.md

Layout intelligence only:

- config-driven layout rules
- process/annotation lane placement
- edge handle routing
- deterministic non-overlap enforcement
- strict separation from semantic content allocation

4) TEST_IMPORT_CONTENT_TEMPLATES_SPEC.md

Test import content and templates only:

- quick templates and grouped "Test Imports" menu
- TOC/raw/gold template sets
- intended usage and expected output behavior

5) IMPORT_MAP_SPEC.md

Import Map only:

- map clusters and map phases behavior
- seeded/empty cluster visibility and ordering
- import-map-specific controls
- Content Map + Imported Map review panels

6) SPEC_EXPORT_MANIFEST.json

Machine-readable manifest for spec export consumers.

Additional model artifacts included in bundle

- IMPORT_MODEL_SPEC.md
- import-model.schema.json
- import-model.example.json

Notes

- Each main spec contains a brief description and a Mermaid visualization overview.
- This package is prepared for direct export and external sharing/review.
