

Test Import Content and Templates Spec

Status: Active

Scope: Template content, grouped test menu, and deterministic test fixture loading

Brief description

This spec defines the import test content assets and how they are exposed in the UI through a compact two-layer "Test Imports" menu. The goal is repeatable scenario loading (TOC seed, raw chapter, and gold chapter variants) without cluttering the top action strip.

Visual overview

```
```mermaid
flowchart TD
 A[Quick import strip] --> B[Test Imports]
 B --> C[TOC group]
 B --> D[Withdrawal 4.2 group]
 B --> E[Cashback 6.3 group]
 B --> F[Reopening 8.1 group]
 C --> C1[Gold TOC Seed]
 D --> D1[4.2 WD Raw]
 D --> D2[4.2 WD Gold]
 E --> E1[6.3 CB Raw]
 E --> E2[6.3 CB Gold]
 F --> F1[8.1 AR Raw]
 F --> F2[8.1 AR Gold]
 D1 --> G[importFromAiAssist]
 D2 --> H[importFromText]
 C1 --> H
```
```

Content sources

Defined in `src/App.tsx`:

- `GOLD\_TOC\_SEED\_TEMPLATE`
- `CHAPTER\_WITHDRAWAL\_RAW\_TEMPLATE`
- `CHAPTER\_WITHDRAWAL\_GOLD\_TEMPLATE`
- `CHAPTER\_CASHBACK\_RAW\_TEMPLATE`
- `CHAPTER\_CASHBACK\_GOLD\_TEMPLATE`
- `CHAPTER\_REOPENING\_RAW\_TEMPLATE`
- `CHAPTER\_REOPENING\_GOLD\_TEMPLATE`

Mapped into:

- `IMPORT\_TEST\_TEMPLATES`
- `IMPORT\_TEST\_TEMPLATE\_GROUPS`

Runtime behavior

1. User opens Test Imports popover.

2. User chooses scenario pill in second layer.

3. App:

- copies payload into AI prompt box,
- switches tab to Import Map,
- executes import with mode-specific entrypoint (`text` or `ai`),
- updates import stage (`toc\_seed` or `detail\_ingest`) and header notice.

Current UX constraints and decisions

- Gold QA fixture buttons were removed from the top strip to keep focus on direct import testing.
- Test Imports popover z-index is raised so it cannot be blocked by the "How to build" hint.
- Clear button remains available in primary strip to reset current version rapidly.

Export considerations

The template bundle is export-ready as structured text constants and can be externalized later:

- JSON seed pack (template id, label, mode, payload)
- optional markdown companion with narrative guidance

Future extension points

- Add import template editor (CRUD) with persistence.
- Bind templates to evaluation presets (without re-cluttering top strip).
- Attach confidence baselines and expected graph signatures per template.
